Cancer in children is curable!
However, delayed diagnosis diminishes survival rates. While in resource rich countries, 8 out of 10 children survive their disease, in countries with low resources, only 2 to 3 out of 10 will survive – mostly due to late presentation at the hospital. That means: each year more than 90,000 children worldwide die needlessly!

**Help children with cancer** by spreading this information:

**Warning signs for Cancer in Children.** Seek medical help early for persistent symptoms such as:
- White spot in the eye, new squint, blindness, bulging eyeball.
- Lump in abdomen/pelvis, head and neck, in limbs, testes, glands.
- Unexplained prolonged fever over 2 weeks.
- Loss of weight, pallor, fatigue, easy bruising or bleeding.
- Aching bones, joints, back, and easy fractures.
- Neurological signs: Change or deterioration in walk, balance, or speech, regression of milestones, headache for more than two weeks with or without vomiting, enlarging head.
