Cancer in children is curable!
Today, 8 out of 10 children with cancer can be cured if treated at a specialized (paediatric oncology) centre. Early diagnosis can make a difference in outcome and long term effects. Thus, keep in mind that certain health problems may be signs of a malignant disease and should be monitored.

Help children with cancer by spreading this information:

**Warning signs for Cancer in Children.** Seek medical help early for persistent symptoms such as:

- White spot in the eye, new squint, blindness, bulging eyeball.
- Lump in abdomen/pelvis, head and neck, in limbs, testes, glands.
- Unexplained prolonged fever over 2 weeks.
- Loss of weight, pallor, fatigue, easy bruising or bleeding.
- Aching bones, joints, back, and easy fractures.
- Neurological signs: Change or deterioration in walk, balance, or speech, regression of milestones, headache for more than two weeks with or without vomiting, enlarging head.
